Section: C

CLO #	Course Learning Outcomes (CLOs)	PLO Mapping	Bloom's Taxonomy
1	Describe the role of business processes in organizational efficiency	PLO-2 (Knowledge for Solving Computing Problems)	C2 (Understanding)

Question 1:

[03 Marks]

Scenario:

You are working as a financial analyst in a company that recently implemented an Enterprise Resource Planning (ERP) system. The finance department is transitioning from manual processes to using the ERP system for managing accounts payable, accounts receivable, and general ledger functions.

Task:

The company's management has asked you to process a customer's payment. The payment was made for an invoice totaling \$5,000, but the customer mistakenly transferred \$4,800. Using the ERP system, identify the appropriate steps to record the payment, address the shortfall, and update the accounts receivable balance.

Question:

Based on the scenario, **demonstrate** how you would:

1. Record the partial payment in the ERP system while ensuring accurate accounting records.
2. Generate a report to highlight the outstanding balance.
3. Propose a follow-up action with the customer regarding the shortfall.

1. Recording the Partial Payment in the ERP System

To ensure accurate accounting records, follow these steps:

1. **Access the Accounts Receivable Module:**
 - Log in to the ERP system and navigate to the "Accounts Receivable" module.
2. **Locate the Customer Invoice:**
 - Search for the specific invoice totaling \$5,000 using the invoice number or customer details.
3. **Record the Partial Payment:**
 - Enter the payment details as follows:
 - Payment amount: \$4,800.
 - Payment method (e.g., bank transfer).
 - Date of payment.
 - Reference number for the transaction (if available).

- The ERP system will automatically allocate the \$4,800 to the \$5,000 invoice and calculate the outstanding balance.

4. **Update the Customer's Account:**

- The remaining balance of \$200 will be recorded as an open item in the customer's account.
- The system will flag the invoice as "Partially Paid" with the outstanding amount.

2. **Generating a Report to Highlight the Outstanding Balance**

To communicate the shortfall and maintain accurate financial oversight:

1. **Generate the Accounts Receivable Report:**

- Access the "Reports" section of the ERP system.
- Choose the "Outstanding Balances" or "Customer Aging" report.

2. **Filter for the Specific Customer:**

- Apply filters to include only the customer and invoice in question.
- The report will display:
 - Total invoice amount: \$5,000.
 - Payment received: \$4,800.
 - Outstanding balance: \$200.

3. **Export the Report:**

- Export the report in a format such as PDF or Excel for internal review or to share with the customer.

3. **Proposing a Follow-Up Action with the Customer**

To address the shortfall professionally:

1. **Prepare a Communication Draft:**

- Compose an email or letter informing the customer of the shortfall.
- Include key details:
 - Original invoice amount: \$5,000.
 - Payment received: \$4,800.
 - Outstanding balance: \$200.
 - Invoice number and payment reference for clarity.

2. **Provide Payment Instructions:**

- Include the company's bank details or preferred payment method for the remaining balance.
- Set a reasonable deadline for the payment, e.g., "within 7 business days."

3. **Offer Assistance:**

- Mention that the finance team is available for any clarifications or assistance regarding the payment.
- Example: "If you believe this discrepancy occurred in error or require additional details, please contact us at [email/phone number]."

4. **Record Follow-Up in the ERP System:**

- Update the ERP system with a note indicating the communication with the customer, including the date and content of the follow-up.

Conclusion

- **Recording Payment:** The partial payment is accurately recorded in the ERP system, with the outstanding balance flagged.
- **Generating Report:** An outstanding balance report is created to maintain visibility of the shortfall.
- **Follow-Up Action:** A clear, professional communication is sent to the customer, ensuring they are informed of the discrepancy and provided with steps to resolve it.

By taking these steps, the company ensures accurate financial records, effective communication, and timely resolution of the outstanding balance.
