

The difference between explicit and implicit information is the delivery of the information. Explicit information is information that is directly stated to the audience or reader, such as "Miles does not like dogs." Implicit information is information which is suggested, but never directly stated. Implicit information is implied to the reader, for example, "Miles moved away from the dog. He had never had a pet dog." It is suggested that Miles does not like dogs because he moves away from the dog, but it is never

Explicit information will be the information that you can see on the page - the 'obvious'.

Implicit information, is what is suggested - what lays between the lines.

For example, in a story, a male character may gift his love interest a red rose.

Explicit: We know he is interested in her because he has given her a gift, that gift is a rose.

Implicit: A red rose symbolizes love, but often associate the color red with blood, and we associate blood with the heart. Therefore, by giving his love interest a red rose, we can suggest that the male character is giving her his heart.

Explicit describes something that is very clear and without vagueness or ambiguity. **Implicit** often functions as the opposite, referring to something that is understood, but not described clearly or directly, and often using implication or assumption.

Explicit information is what I like to call the "base layer of information". It is the direct and obvious information that we are given. Then we add in implicit

information, which I call "the detailed layer of information" as it gives us greater detail about what is happening.

The adjective explicit describes **something that has been expressed directly**. For example, saying We gave them explicit instructions means that the instructions were stated in detail. Something that's described as explicit doesn't leave anything up to interpretation.

What is explicit explaining?

Explicit explanation is **a way to teach concepts by explaining them clearly to students leaving no room for doubt**. This process is important because it emphasizes modeling and critical thinking to students during reading instruction.

Explicit and **implicit** can function as opposites, where **explicit means** 'very clearly explained,' and **implicit means** 'understood, but not described clearly; ...
