COMPUTER SCIENCE & INFORMATION TECHNOLOGY DEPARTMENT

Spring 2026
Entrepreneurship(HS-411)
Assignment # 3

Semester: VIII
Announced Date: 06/06/2026
Total Marks: 03
Instructor Name: Miss Ayesha Urooj/ Miss Anam Siddiqui

Batch: 2022F
Due Date: 14/06/2026
Marks Obtained:
RollNo.:2022F-BCS-

2022F-BCS-152
Section: B

CLO #	Course Learning Outcomes (CLOs)	PLO Mapping	Bloom’s Taxonomy
CLO 3	Apply entrepreneurial skills and tools specifically needed for entrepreneurial ventures.	PLO-3 (Problem Analysis)	C3 (Applying)

Question 1: [03 Marks]

Imagine you are an entrepreneur preparing to launch a new tech startup. Based on the framework provided in Lecture No. 15 (Pitching and Presenting Ideas), complete the following three tasks:

Task 1: Audience & Objective Definition

- Identify your target audience (e.g., angel investors, enterprise clients, or internal project board) .
- Explain how you will research and tailor your presentation to match their specific expectations .
- Clearly state your primary objective and your final Call to Action (CTA).

Task 3: Delivery Strategy & Q&A Preparation

- Describe how you will use **storytelling** and **visual aids** to keep your audience engaged.
- Anticipate **three challenging questions** your audience might ask about your business model or financials .
- Provide your strategy for handling these questions while remaining calm and open to feedback.

Answer

Task 1: Audience & Objective Definition

Target Audience

For my technology startup, the primary target audience would be **angel investors** who specialize in funding early-stage innovative businesses. Angel investors not only provide financial capital but also contribute valuable industry expertise, mentorship, and networking opportunities that can accelerate the growth of a startup. Since they evaluate both the business idea and the entrepreneur behind it, the presentation must demonstrate innovation, scalability, and a clear path to profitability.

Research and Tailoring the Presentation

Before delivering the pitch, I would conduct extensive research on the investors' backgrounds, previous investment portfolios, preferred industries, and funding patterns. Understanding whether they prioritize software solutions, artificial intelligence, fintech, or SaaS businesses would allow me to customize the presentation according to their interests.

The pitch would emphasize the startup's unique value proposition, market demand, competitive advantage, revenue generation strategy, and future scalability. Financial projections, customer acquisition strategies, and growth metrics would be presented using reliable data and visual evidence to address investors' expectations. By tailoring the content specifically to their interests and investment criteria, the presentation becomes more persuasive and relevant.

Primary Objective

The primary objective of the presentation is to **secure seed funding of USD 500,000** to finalize product development, expand the technical team, launch marketing campaigns, and accelerate customer acquisition.

Call to Action (CTA)

The presentation would conclude with a clear and compelling call to action:

"We invite you to partner with us by investing in our vision and joining our journey to revolutionize the market. We would be pleased to schedule a detailed follow-up meeting to discuss investment opportunities, equity participation, and long-term collaboration."

Task 3: Delivery Strategy & Q&A Preparation

Storytelling and Visual Aids

To capture attention from the beginning, I would start with a compelling story about a real customer facing a significant problem that my startup solves. Rather than immediately discussing technology, I would focus on the human challenge, creating an emotional connection with the audience. This storytelling approach helps investors understand the practical value and social impact of the solution.

The presentation would incorporate professional visual aids such as:

- High-quality slides with minimal text and impactful graphics.
- Market size and growth statistics displayed through charts and infographics.
- A live demonstration or prototype of the product.
- Customer journey diagrams explaining how users interact with the solution.
- Revenue projections and financial forecasts illustrated using simple graphs.

These visuals would enhance understanding, maintain audience engagement, and make complex information easier to remember.

Anticipated Challenging Questions

Question 1:

Your market already has established competitors. Why would customers choose your product instead?

Response:

Our startup differentiates itself through AI-powered automation, lower operational costs, superior user experience, and faster service delivery. While competitors focus on generic solutions, our platform addresses specific customer pain points with greater efficiency and personalization, creating a sustainable competitive advantage.

Question 2:

How realistic are your financial projections, and what assumptions have you made?

Response:

Our financial forecasts are based on detailed market research, competitor benchmarking, customer acquisition estimates, and conservative growth assumptions. We have deliberately avoided overestimating revenue and included contingency plans to accommodate market fluctuations while maintaining financial stability.

Question 3:

What will happen if you fail to achieve your projected growth within the first two years?

Response:

If growth falls below expectations, we will implement cost optimization measures, refine our marketing strategy, diversify revenue streams, and prioritize customer retention. Our business model is designed with flexibility to adapt to changing market conditions while maintaining long-term sustainability.

Strategy for Handling Questions and Feedback

During the question-and-answer session, I would maintain confidence, professionalism, and composure regardless of the difficulty of the questions. I would actively listen before responding, ensuring that every answer is thoughtful, evidence-based, and concise.

If confronted with criticism or unexpected concerns, I would acknowledge the feedback respectfully rather than becoming defensive. Where appropriate, I would explain how the business can adapt and improve based on constructive suggestions. If I do not have an immediate answer, I would honestly state that additional research is required and commit to providing accurate information after the presentation. By remaining calm, transparent, and open-minded, I would build credibility and demonstrate the leadership qualities that investors seek in successful entrepreneurs.

Conclusion

An effective startup pitch requires more than presenting a business idea; it demands a deep understanding of the audience, a clearly defined objective, engaging storytelling, and confident communication. By tailoring the presentation to investor expectations, supporting claims with data, and responding professionally to challenging questions, entrepreneurs can significantly increase their chances of securing investment and establishing long-term partnerships. A well-prepared pitch not only communicates the value of the business but also reflects the competence, vision, and adaptability of the entrepreneur behind it.
