Spring 2026
Entrepreneurship(HS-411)
Assignment # 3

Semester: VIII
Announced Date: 06/06/2026
Total Marks: 03
Instructor Name: Miss Ayesha Urooj/ Miss Anam Siddiqui

Batch: 2022F
Due Date: 14/06/2026
Marks Obtained:
RollNo.:2022F-BCS-

CLO #	Course Learning Outcomes (CLOs)	PLO Mapping	Bloom’s Taxonomy
CLO 3	Apply entrepreneurial skills and tools specifically needed for entrepreneurial ventures.	PLO-3 (Problem Analysis)	C3 (Applying)

2022F-BCS- 180
Section B

Question 1: [03 Marks]

Imagine you are an entrepreneur preparing to launch a new tech startup. Based on the framework provided in Lecture No. 15 (Pitching and Presenting Ideas), complete the following three tasks:

Task 1: Audience & Objective Definition

- Identify your target audience (e.g., angel investors, enterprise clients, or internal project board) .
- Explain how you will research and tailor your presentation to match their specific expectations .
- Clearly state your primary objective and your final Call to Action (CTA).

Task 3: Delivery Strategy & Q&A Preparation

- Describe how you will use **storytelling** and **visual aids** to keep your audience engaged.
- Anticipate **three challenging questions** your audience might ask about your business model or financials .
- Provide your strategy for handling these questions while remaining calm and open to feedback.

Question 1

Task 1: Audience Analysis and Presentation Goal

Identifying the Target Audience

For this startup pitch, my intended audience would be an **internal project evaluation board** within a technology incubator that reviews innovative business ideas before approving funding and mentorship. The board consists of experienced professionals who assess the feasibility, scalability, and long-term sustainability of new ventures.

Adapting the Presentation to Audience Expectations

To prepare an effective presentation, I would first study the incubator's selection criteria, previously accepted startups, and evaluation standards. Understanding their priorities would help me emphasize aspects such as innovation, technical feasibility, market demand, and growth potential. Instead of focusing only on financial returns, I would demonstrate how the startup solves a genuine problem, supports digital transformation, and has the ability to scale into new markets. The presentation would include evidence-based research, industry trends, and a realistic implementation roadmap to align with the board's expectations.

Presentation Objective

The central objective of my presentation is to obtain approval for admission into the incubation program, along with access to mentoring, networking opportunities, and initial funding support that will accelerate the startup's development.

Final Call to Action

I would conclude by encouraging the evaluation committee to approve the proposal and provide incubation resources, stating:

"With your guidance and support, this innovative solution can be transformed into a successful and scalable business that delivers long-term value to customers and stakeholders alike."

Task 3: Presentation Delivery and Managing Questions

Audience Engagement Strategy

Rather than beginning with technical specifications, I would open the presentation by describing a common challenge faced by businesses and illustrate its impact through a short real-world example. This approach creates curiosity and allows the audience to understand the significance of the problem before introducing the proposed solution.

To maintain attention throughout the presentation, I would incorporate:

- Professionally designed slides with simple layouts.
- Process diagrams explaining how the solution works.
- Infographics summarizing market opportunities.
- Screenshots or prototypes demonstrating the product interface.
- Comparative charts highlighting improvements over traditional methods.

These visual elements would simplify complex information and make the presentation more memorable.

Potential Difficult Questions

1. What evidence suggests that customers will actually adopt your solution?

Response:

I would explain that the business idea is supported by market surveys, customer interviews, and competitor analysis indicating a clear demand. Pilot testing and early user feedback would also be presented as indicators of future adoption.

2. How do you plan to remain competitive if larger companies enter the same market?

Response:

The startup's strategy focuses on continuous innovation, rapid product updates, personalized customer service, and building strong relationships with users. These factors create differentiation that is difficult for larger organizations to replicate quickly.

3. How will the company manage cash flow during the early stages of operation?

Response:

Financial planning includes maintaining controlled operational expenses, generating recurring subscription revenue, seeking strategic partnerships, and keeping reserve funds for unexpected challenges. Regular financial monitoring will ensure sustainable growth.

Approach to Answering Questions

When faced with challenging questions, I would carefully listen before responding to ensure I fully understand the concern. My answers would be concise, supported by facts, and presented confidently without becoming defensive.

If feedback reveals weaknesses in the proposal, I would acknowledge the suggestions positively and explain how they could be incorporated into future improvements. In situations where additional information is needed, I would commit to conducting further research and following up with accurate details rather than making unsupported claims.

Maintaining professionalism, honesty, and adaptability throughout the discussion would strengthen the audience's confidence in both the startup and its leadership.
