Section: B

CLO #	Course Learning Outcomes (CLOs)	PLO Mapping	Bloom's Taxonomy
CLO 3	Apply entrepreneurial skills and tools specifically needed for entrepreneurial ventures.	PLO-3 (Problem Analysis)	C3 (Applying)

Question:

(04 Marks)

Imagine you want to become an entrepreneur and start your own business. Identify a problem in your community or daily life and develop a business idea that can solve that problem.

Instructions

Write a short business proposal covering the following:

- What problem have you identified?
- Who is affected by this problem?
- What business idea do you propose to solve it?
- How will your product or service help people?
- Why do you think your business can be successful?

ANSWER — Business Proposal

"SwiftFix — On-Demand Home Repair & Maintenance Services"

Q1. What problem have you identified?

In Karachi, and broadly across urban Pakistan, finding reliable, skilled home repair and maintenance workers — such as plumbers, electricians, carpenters, painters, and AC technicians — is an extremely frustrating and time-consuming experience. Residents typically rely on word-of-mouth referrals, random roadside workers, or unverified contacts, with no transparency regarding pricing, qualifications, or reliability. Appointments are frequently missed, work quality is inconsistent, and overcharging is rampant, particularly for female homeowners

or elderly residents who cannot negotiate effectively. Additionally, skilled workers themselves struggle to find consistent, well-paying work because they lack a platform to reach customers beyond their limited personal networks.

This disconnect between skilled labor supply and customer demand is a deeply entrenched daily-life problem affecting millions of households in every major city of Pakistan.

Q2. Who is affected by this problem?

The problem affects two distinct groups:

Customers (Demand Side):

- Working professionals and nuclear families who have no time to hunt for workers
- Female homeowners and elderly citizens who are especially vulnerable to exploitation
- Newly married couples setting up homes for the first time
- Landlords and property managers maintaining multiple rental units
- Small business owners needing office maintenance services

Workers (Supply Side):

- Skilled tradespeople (electricians, plumbers, carpenters, painters, AC mechanics) who have no digital presence
- Young trained technicians who cannot grow their client base independently
- Workers in informal labour markets who face income instability and seasonal unemployment

Q3. What business idea do you propose to solve it?

I propose **SwiftFix** — a mobile and web-based on-demand home services platform that connects verified, trained service professionals with customers across Karachi, and scalable to other major Pakistani cities.

SwiftFix operates on a marketplace model similar to what Careem did for ride-hailing, but applied to home services. Key features of the platform include:

- Verified professional profiles with ratings, reviews, and skill certifications
- Instant booking or scheduled appointments through a mobile app (iOS & Android)
- Transparent, upfront pricing with no hidden charges
- Real-time tracking of worker arrival (like ride-hailing apps)
- In-app secure payment (JazzCash, Easypaisa, bank transfer, or cash)
- Post-service quality guarantee: free redo within 7 days if the customer is unsatisfied
- Worker onboarding with background verification, skill testing, and safety training
- A dedicated women-preferred option: female customers can request female technicians where available

Service categories will include: Plumbing, Electrical, Carpentry, Painting, AC installation & repair, Appliance repair, Deep cleaning, Pest control, and CCTV/networking installation.

Q4. How will your product or service help people?

For Customers:

- Saves time: Book a verified professional in under 3 minutes instead of spending hours calling around
- Saves money: Transparent pricing prevents overcharging; competitive rates due to worker competition on the platform
- Builds trust: Reviews, ratings, and verified IDs give confidence before inviting someone into the home
- Provides safety: Background-checked workers and in-app emergency contact options
- Offers convenience: One app for all home maintenance needs, 24/7 availability for emergencies

For Workers:

- Provides a steady stream of verified, paying customers without dependence on middlemen
- Offers digital payment eliminating disputes over cash
- Builds a professional reputation through public ratings and reviews
- Delivers free skill training and certification programs to improve earnings
- Enables income stability through subscription or retainer plans with regular clients

Q5. Why do you think your business can be successful?

SwiftFix has strong potential for success based on several key factors:

1. Large and Underserved Market: Pakistan has over 220 million people with rapidly growing urban populations. Karachi alone has approximately 20 million residents, the vast majority of whom face this problem daily. No dominant, trusted home services platform currently exists in the Pakistani market — making this a first-mover opportunity.

2. Proven Global Model: The concept is proven worldwide. Companies like Urban Company (India), TaskRabbit (USA), and Helpling (Europe) have built billion-dollar businesses on this model. Pakistan's market conditions — large skilled labor pool, growing smartphone penetration (now over 50%), and widespread mobile payments through JazzCash/Easypaisa — make it ready for this solution.

3. Low Customer Acquisition Cost: Word-of-mouth spreads rapidly when a service genuinely solves a painful everyday problem. One satisfied customer typically refers 3–5 others, creating organic growth with minimal marketing spend.

4. Scalable Technology: A mobile-first platform built on modern cloud infrastructure can scale from one city to ten cities without proportional cost increases. Once the Karachi market is established, expansion to Lahore, Islamabad, and Faisalabad follows the same playbook.

5. Multiple Revenue Streams: SwiftFix earns through a commission (15–20%) on every booking, premium worker subscriptions for featured listings, B2B contracts with housing societies and corporate offices, and in-app advertising from materials/tools brands. This diversified revenue model reduces business risk.

6. Social Impact Narrative: SwiftFix formalizes an informal economy, providing better wages and dignity to skilled workers. This story attracts impact investors, government support, and positive media coverage — all powerful accelerants for an early-stage startup.

Conclusion

SwiftFix addresses a real, large-scale, and deeply felt problem in Pakistani society by leveraging technology to connect two underserved groups — customers who need reliable help and workers who need reliable income. With a proven global business model, a ready market, scalable technology, and multiple revenue streams, SwiftFix has the foundations to become a successful and socially impactful entrepreneurial venture.
