

To:

The Chairperson

Department of Computer Science

Sir Syed University

Subject: Request for Updating the Course Information Sheet (CIS) for Web Engineering

Dear Chairperson,

We, the students of 5th Semester, BS(CS), wish to draw your attention to the urgent need to update the topics outlined in the Course Information Sheet (CIS) for the Web Engineering course. We believe this update is essential to ensure the course remains relevant to current industry practices and adequately prepares students for their future careers.

During the initial lecture, the instructor presented the following topics:

Client-side technologies: HTML, CSS, JavaScript, Bootstrap, jQuery, JSON

Server-side technologies: C#, WebAPI Basics, LINQ queries, MVC Framework, Data First Approach, and Web Application Deployment

While these topics provide a strong foundation, they no longer reflect the demands of the fast-evolving web development industry. Technologies such as React, Redux, Next.js, and modern JavaScript practices (e.g., ES6+, TypeScript) are now the industry standard for creating scalable, efficient, and maintainable web applications. Furthermore, tools like Webpack for bundling, and methodologies like Context API for state management, are critical for building modern web solutions.

Key Reasons for Updating the CIS:

1. Alignment with Industry Standards:

Employers increasingly seek graduates with hands-on experience in modern frameworks and libraries like React, Redux, and Next.js. Familiarity with these tools will give our graduates a competitive edge in the job market.

2. Relevance for Internships and Job Opportunities:

Companies expect candidates to be proficient in contemporary technologies. Updating the curriculum to include React and modern JavaScript (ES6/ESNEXT, TypeScript) will enhance employability and prepare us for internships and entry-level roles.

3. Focus on Scalable Practices:

Topics such as state management (Redux/Context) and server-side rendering (Next.js) are integral to developing robust and scalable web applications. These skills will enable students to create enterprise-level solutions.

4. Entrepreneurship and Innovation:

Many students aspire to build their own startups or freelance. Learning cutting-edge tools will empower them to deliver competitive solutions and create innovative products.

Proposed Update to the CIS:

- HTML, CSS, and Intermediate JavaScript (ES6+ Basics and Beyond)
- DOM, BOM, and JavaScript Essentials (The Good Parts)
- CSS Frameworks (Bootstrap and SASS)
- Modern JavaScript (ES5/ES6/ESNEXT, TypeScript)
- Bundling and Build Tools (Webpack, Parcel)
- Frontend Frameworks (React Class/Functional Components, Redux/Context API, React Router)
- Full-Stack Frameworks (Next.js Basics)

We propose these topics as they provide practical, hands-on knowledge and align with the technologies used in industry projects. By integrating these into the curriculum, the Web Engineering course will stay ahead of trends, better serving both students and the university's reputation for academic excellence.

We kindly request your consideration and consultation with faculty members, alumni, and industry advisors to implement these updates. This initiative will significantly enhance the value of our education and better prepare us for the challenges of the modern web development landscape.

Thank you for your time and attention. We look forward to a positive response and stand ready to assist in any way to facilitate this update.

Sincerely,

Students of the 5th Semester, BS(CS)
