Hi, how can I help? 

Task 02 : Answer the following.

1. What is Environment?

In computing, an **environment** refers to a setup or space where software or applications run. It includes the configuration, tools, libraries, and system settings needed for development, testing, or deployment.

Examples:

- Development environment (for coding and testing)
- Production environment (for running the actual app used by users)
- Virtual environments (isolated setups for specific projects)

2. Why do we make an Environment?

We make environments to:

- Keep things organized (separate development from production)
- Avoid conflicts between software packages or dependencies
- Test safely without affecting live applications
- Control versions of tools or libraries per project

3. How do we make an Environment? Create one.

Task 03: Create an empty file on Jupyter notebook and rename it using your Roll no. [Show all the steps].

```
Jupyter Notebook

[I 2025-04-13 21:21:33.732 ServerApp] jupyter_server_terminals | extension was successfully loaded.
[I 2025-04-13 21:21:33.854 LabApp] JupyterLab extension loaded from D:\Anaconda\Lib\site-packages\jupyterlab
[I 2025-04-13 21:21:33.855 LabApp] JupyterLab application directory is D:\Anaconda\share\jupyter\lab
[I 2025-04-13 21:21:33.872 LabApp] Extension Manager is 'pypi'.
[I 2025-04-13 21:21:34.695 ServerApp] jupyterlab | extension was successfully loaded.
[I 2025-04-13 21:21:34.714 ServerApp] notebook | extension was successfully loaded.
[I 2025-04-13 21:21:34.716 ServerApp] panel.io.jupyter_server_extension | extension was successfully loaded.
[I 2025-04-13 21:21:34.718 ServerApp] Serving notebooks from local directory: C:\Users\Syscom
[I 2025-04-13 21:21:34.719 ServerApp] Jupyter Server 2.14.1 is running at:
[I 2025-04-13 21:21:34.719 ServerApp] http://localhost:8888/tree?token=e5d7ce9ebd31269376b07e342b59d1a8b9e8b6ba332cd09
