

PART-C

Usability Principles:

- ① Simplicity & clarity
- ② Easy navigation
- ③ Search & findability
- ④ Efficiency of use
- ⑤ Accessibility

Important ones & why they are important?

- ① Simplicity & clarity: (most important)

Why:

- A telephone directory is used for quick information retrieval, not learning & exploration.
- Users may include elderly, children, or non-technical user.
- Clear labels, minimal screens, and simple actions reduces confusion & error.

Impact if missing:

- Users struggle to understand how to view or manage contacts.
- Increased errors when adding or editing contacts.

② Search and findability:

Why:

- The primary task of a telephone directory is finding a contact quickly.
- As the number of contacts grows, scrolling becomes inefficient.
- Search by name or number saves time & effort.

Impact:

- Users waste time scrolling through long lists.
- Poor user satisfaction, especially with large directories.

③ Easy Navigation:

Why:

- Users frequently switch b/w viewing, adding, editing & deleting contacts.
- Clear navigation prevents users from getting lost.
- Consistent placement of buttons improves learnability.

Impact of missing:

- Users may struggle to return to the contact list.
- Increased task completion time.

Moderately Important Principles:

① Efficiency of use:

Why:

- Frequent users benefit from fewer steps and faster interaction.
- Important for users who manage many contacts.

⇒ Why it's not the top priority:

- Telephone directories are usually simple & infrequently used.
- First-time ease and clarity matter more than speed optimizations.

Impact if missing:

Tasks take slightly longer but are still achievable.

Least Important (but still necessary):

③ Accessibility:

Why (relative to other):

- For a basic telephone directory, many accessibility needs are already covered by simplicity & clarity.
- Some advanced accessibility features (screen readers, keyboard-only navigation) may not be used by all users.

Why it still matters:

- Essential for users with disabilities.
- Required by accessibility standards & inclusive design principles.

Impact if missing:

- Some users may be unable to use the system at all.
- Legal or ethical concerns may arise.

iii

1. Simplicity & clarity:

Q1 Is the interface easy to understand for first-time users?

Ans The interface should use simple language, clear labels and familiar icons.

Suggestions:-

Display only essential fields such as name & phone # on the mainscreen. Replace technical terms with common words like add, edit & delete contact.

Q2 Is unnecessary information avoided on the main screen?

Ans The main contact list should show minimal details to reduce clutter.

Suggestions:-

Show only contact names & primary numbers; move additional details to the contact detail view.

2. Easy Navigation:

Q1 Can users easily move b/w contact list and contact details?

Ans Users should be able to navigate intuitively without confusion.

Suggestion:-

Add a clearly visible back button & consistent navigation flow (contact → Details → Edit).

Q2 Are navigation controls placed consistently across screens?

Ans Inconsistent placement can confuse users.

Suggestions:-

Place the Add button at the top-right & edit/delete options in the same position on all contact detail pages.

Search & Findability:

Q1 Can users quickly find contact in large directory?
Ans Searching should be fast and effortless.

Suggestions:

Provide a search bar at the top of the contact list that supports searching by name or phone number.

Q2 Is browsing contacts efficient without using search?

Ans Users may prefer browsing instead of typing.

Suggestions:

Add alphabetical sorting and an A-Z index for quick scrolling.

7. Efficiency of Use:

Q1 Can frequent users complete tasks quickly?

Ans Common actions should require minimal steps.

Improvement:

Enable one-tap calling by tapping the phone number & allow quick editing from the contact view.

Q2 Is data entry minimized when adding or editing contacts?

Ans Re-entering information wastes time.

Improvement:

Pre-fill existing contact details during editing and allow quick add with only mandatory fields.

5. Accessibility:

Q1 Can users with visual impairments easily read the interface?

Ans Text should be readable for all users.

Suggestions:-

Use larger font sizes and high-contrast color schemes.

Q2 Can users with physical or cognitive limitations use the system?

Ans The interface should support diverse user needs.

Suggestions:-

Ensure buttons are large enough to tap, provide clear confirmation dialogs, and support screen readers.
