

CS-467- Software Project Management

Lecture No. 10

WORKING WITH ORGANIZATIONAL STRUCTURES

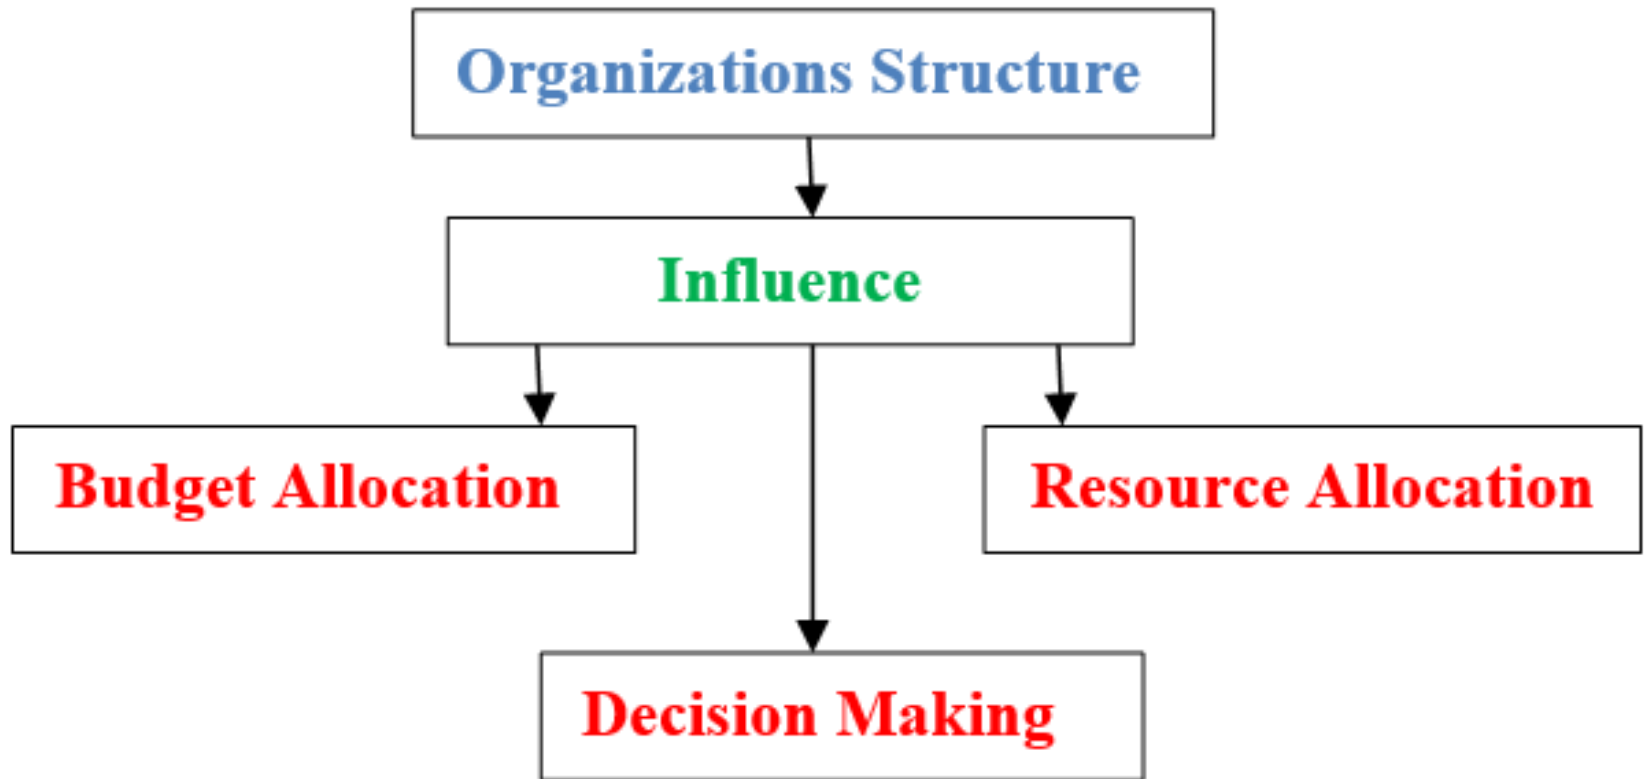

List of Topic to be Discuss in this lecture

- Organizations Structure
- Types of Organizations
 - Functional Organization
 - Projectized Organization
 - Matrix Organizations
 - Strong Matrix
 - Balanced Matrix
 - Weak Matrix

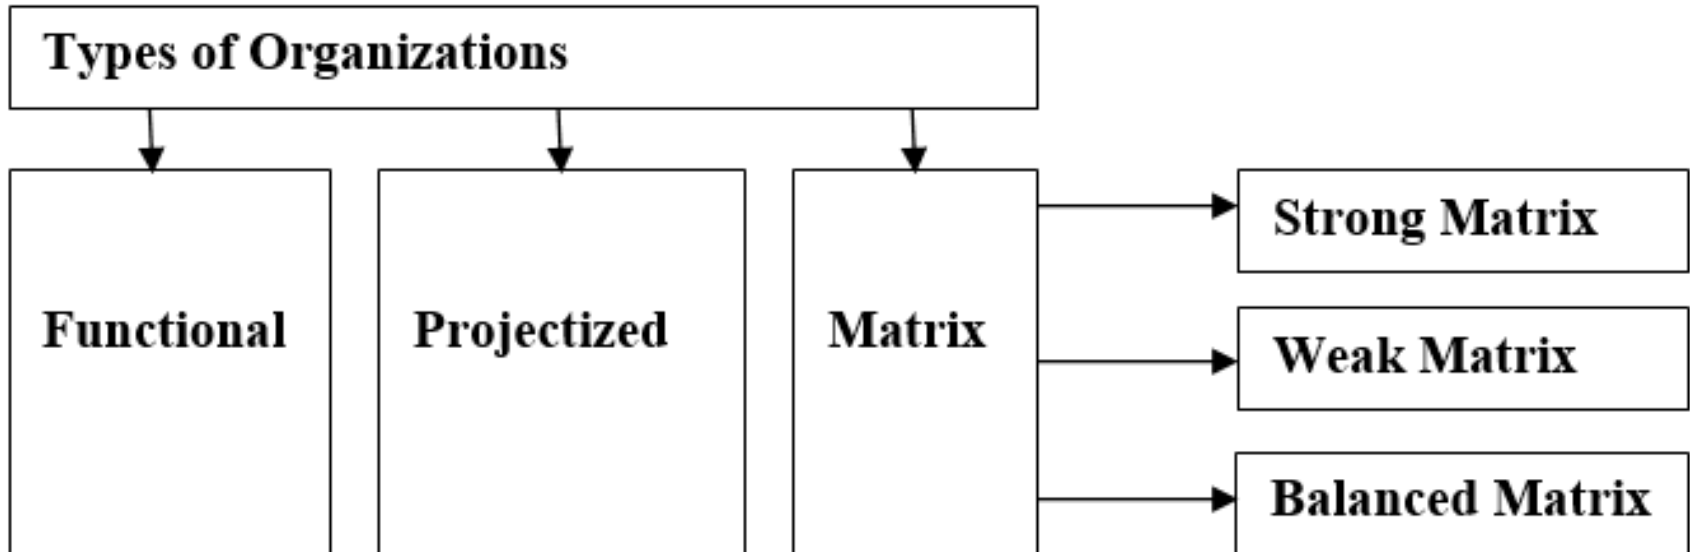

Organizations Structure:

- Every organization regardless of its **size** should **operate** with a **clear** organizational structure.
- An organizational structure is a **set of roles, reporting relationships** and **responsibilities** that **outline** how the **activities, tasks** or **projects** of the organization are directed to meet its objectives.
- The structure outlines **how the flow of information** should be conducted across **all levels of the organization** and lays out the reporting relationship among the **staff, management** or **executives** and even the owners.

Organizations Structure:

Types of Organizations:

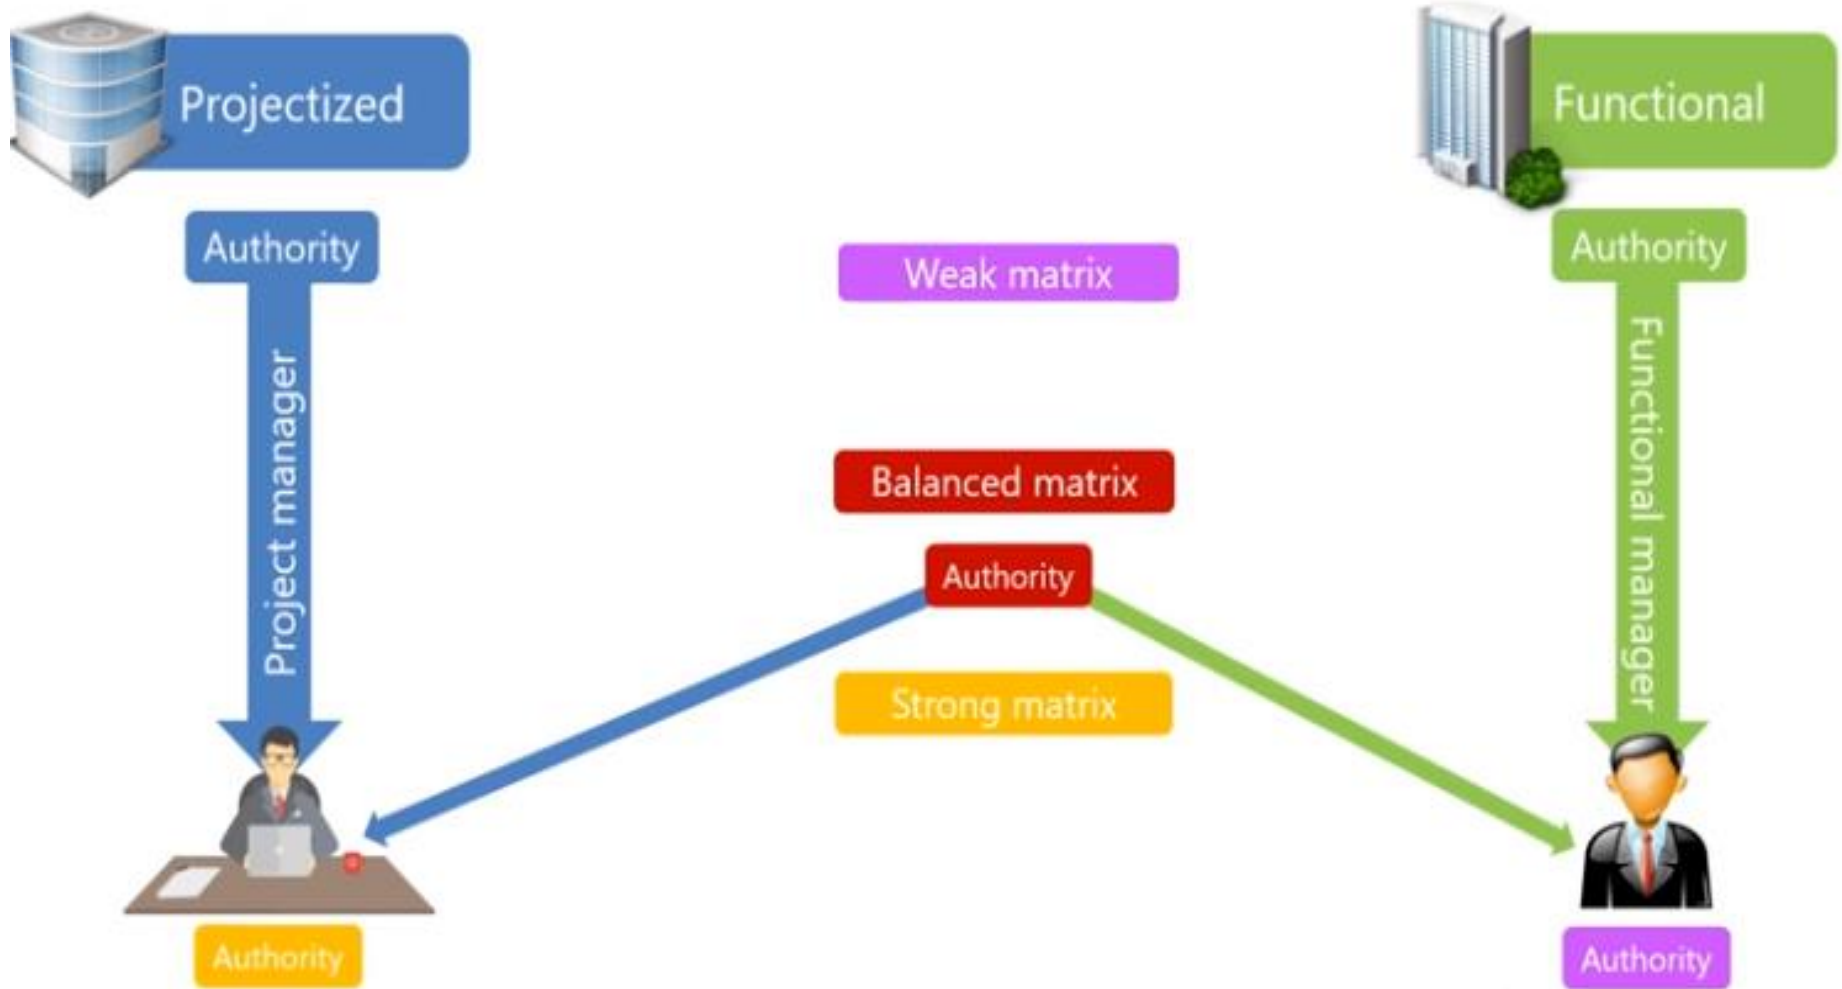

Types of Organizations:

There are different types of organizations; you got three major options when looking at the kinds of organizations he/she can work for.

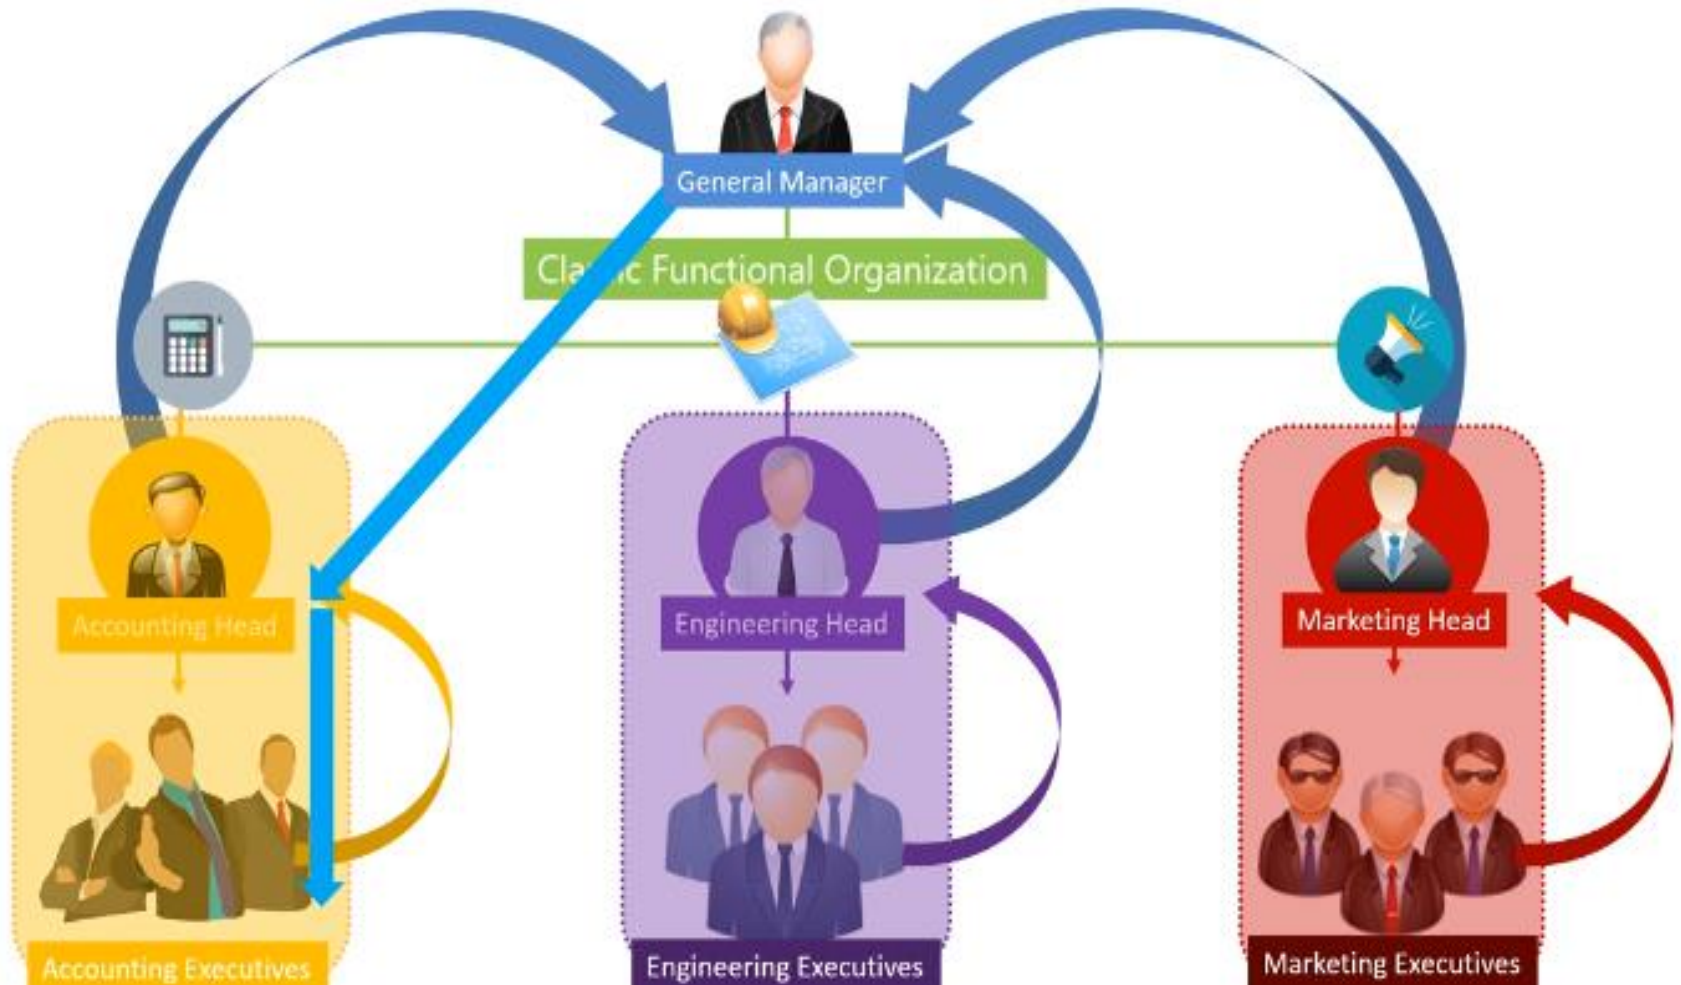

- **Functional:** Assigns the power to the functional manager
- **Projectized:** Assigns the power to the **project manager**
- **Strong Matrix:** Assigns more power to the **project manager** than the functional manager
- **Balanced Matrix:** Assigns equal power to the **project manager** and the functional manager
- **Weak Matrix:** Assigns more power to the **functional manager** than the project manager

Types of Organizations:

Project Manager Authority & Organizational Structures

Typical Example of Functional Organization:

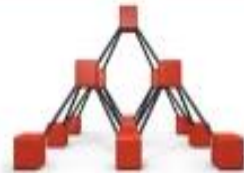

Functional Organization:

- Project management decisions need to be cleared with functional managers. (*In this kind of organization, the project team members always report to a functional manager who calls all the shots*)
- Project managers are assistants to the functional managers in getting the work done.
- Project managers spend a lot of time doing administrative tasks and often only work as project manager part of the time.
- You're likely to find project expeditors in functional organizations. (*All of the project work typically happens within a particular department, and that department's manager is completely in charge of everything*)

Advantages and Disadvantages of Functional Organization

Advantages

Stable Organizations Structure

Employees have a career growth path with separation of functions

Employees have one supervisor with a clear chain of command

Disadvantages

Project manager has little to no formal authority

Multiple projects compete for limited resources and priority

Project team members will likely to remain loyal to their functional manager

Typical Example of Projectized Organization:

Projectized Organization:

- Teams are organized around projects. When a project is done, the team is released, and the team members move on to another project.
- The project manager makes all of the decisions about a project's budget, schedule, quality, and resources. (*If you've worked with a contractor or consulting company, they are usually organized like this.*)
- The PM is responsible for the success or failure of the project.

Advantages and Disadvantages of Projectized Organization

Advantages

It has Clear line of authority

Strong communication with single reporting system

Flexibility in trade offs, and Fast decision making

Disadvantages

Authority & power can make project manager arrogant

The work environment can be stressful, because there is always a deadline

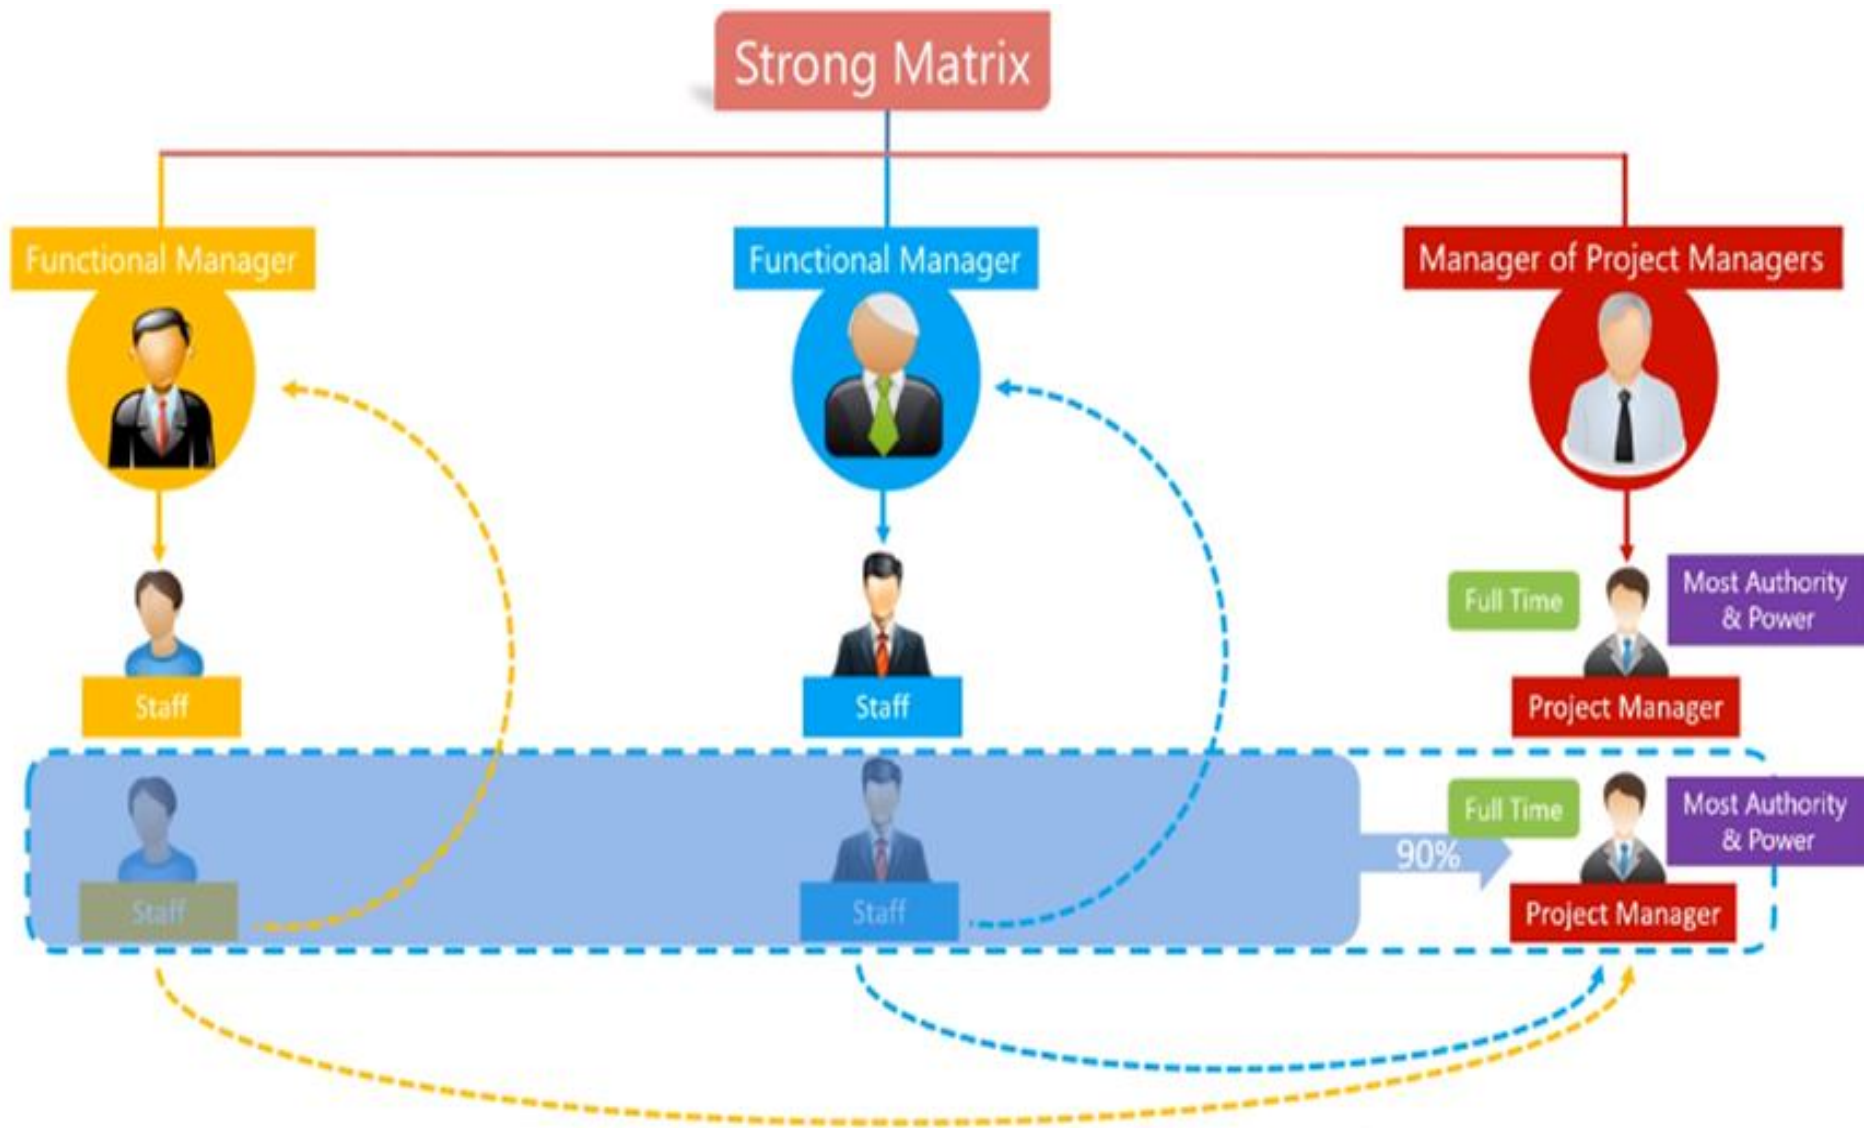

If the project gets elongated, cost of employee and equipment can go higher

Matrix Organization

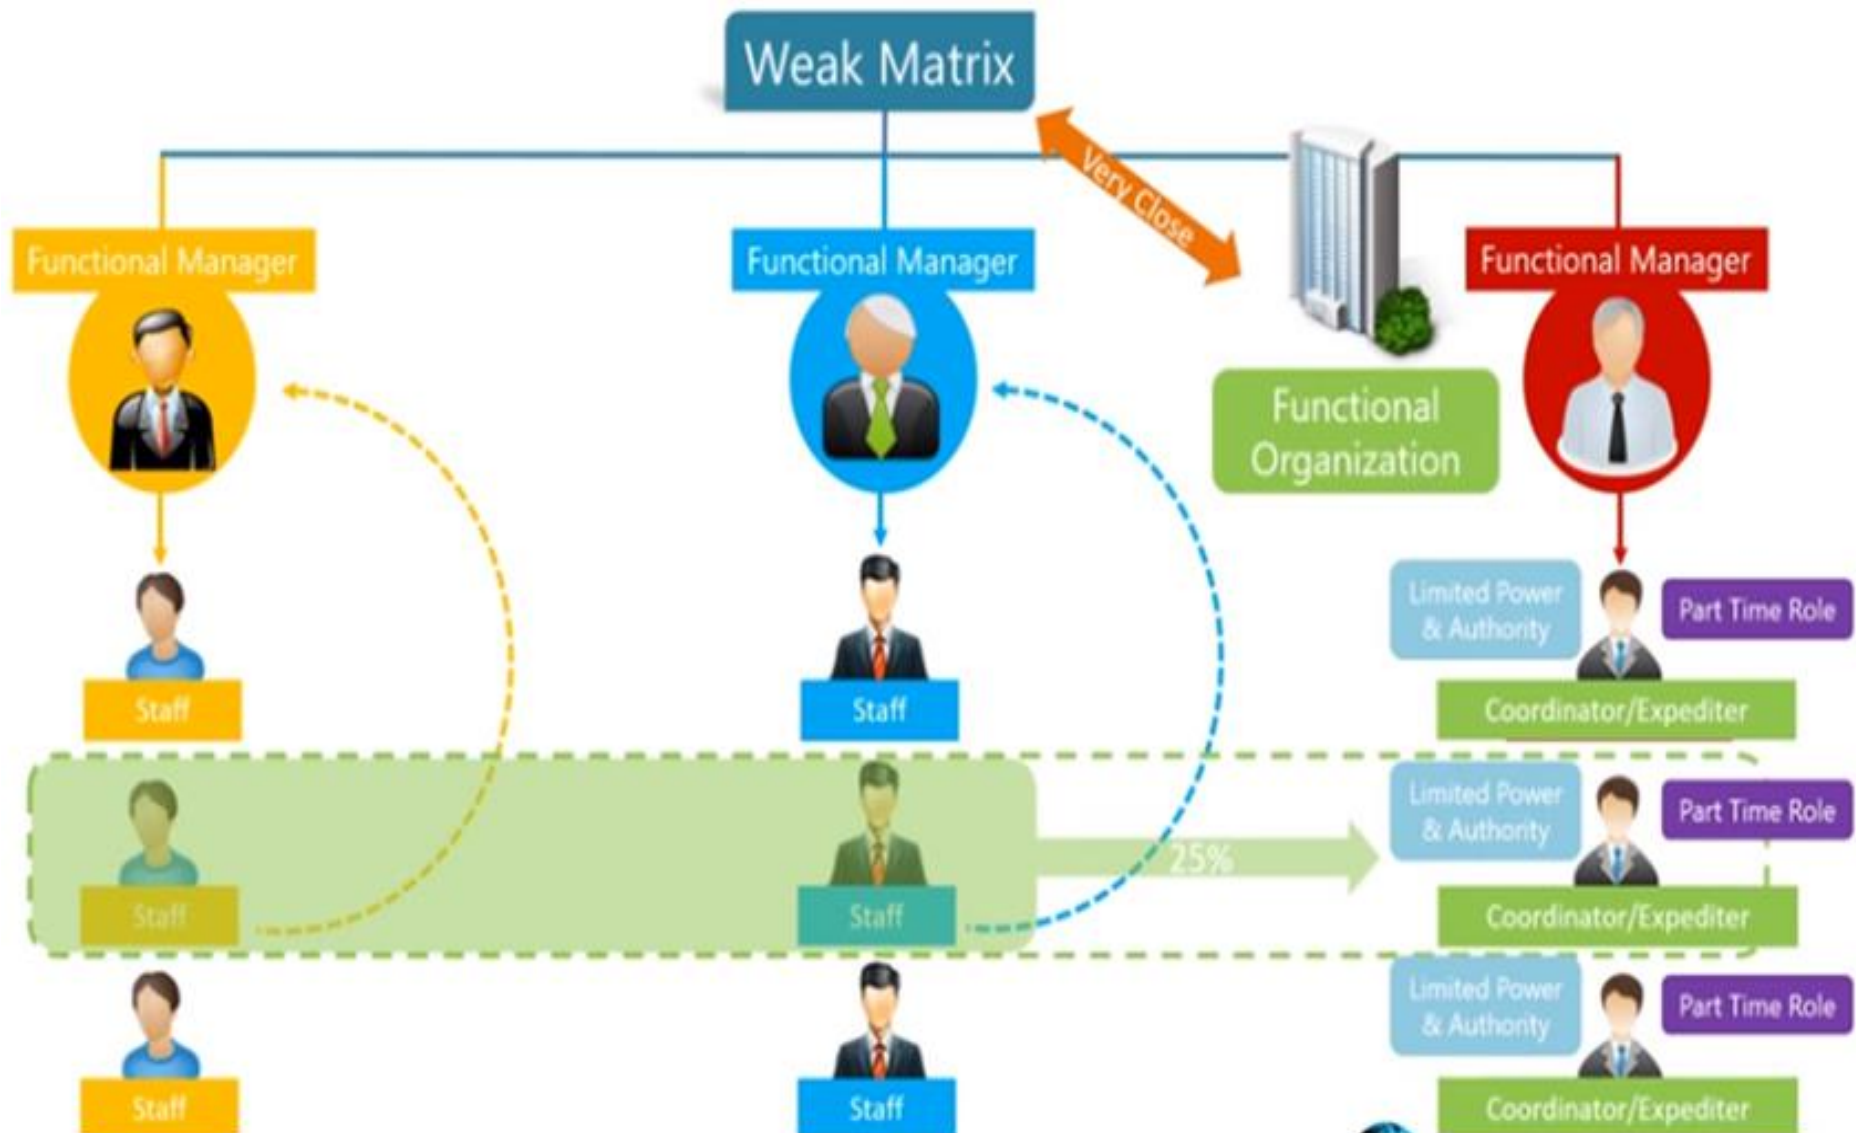

Typical Example of Strong Matrix Organization

Strong Matrix Organization

- Project managers have more authority than functional managers, but the team still reports to both managers.
- The team might be judged based on performance on their projects, as well as on their functional expertise. In a strong matrix, delivery of the project is most important.

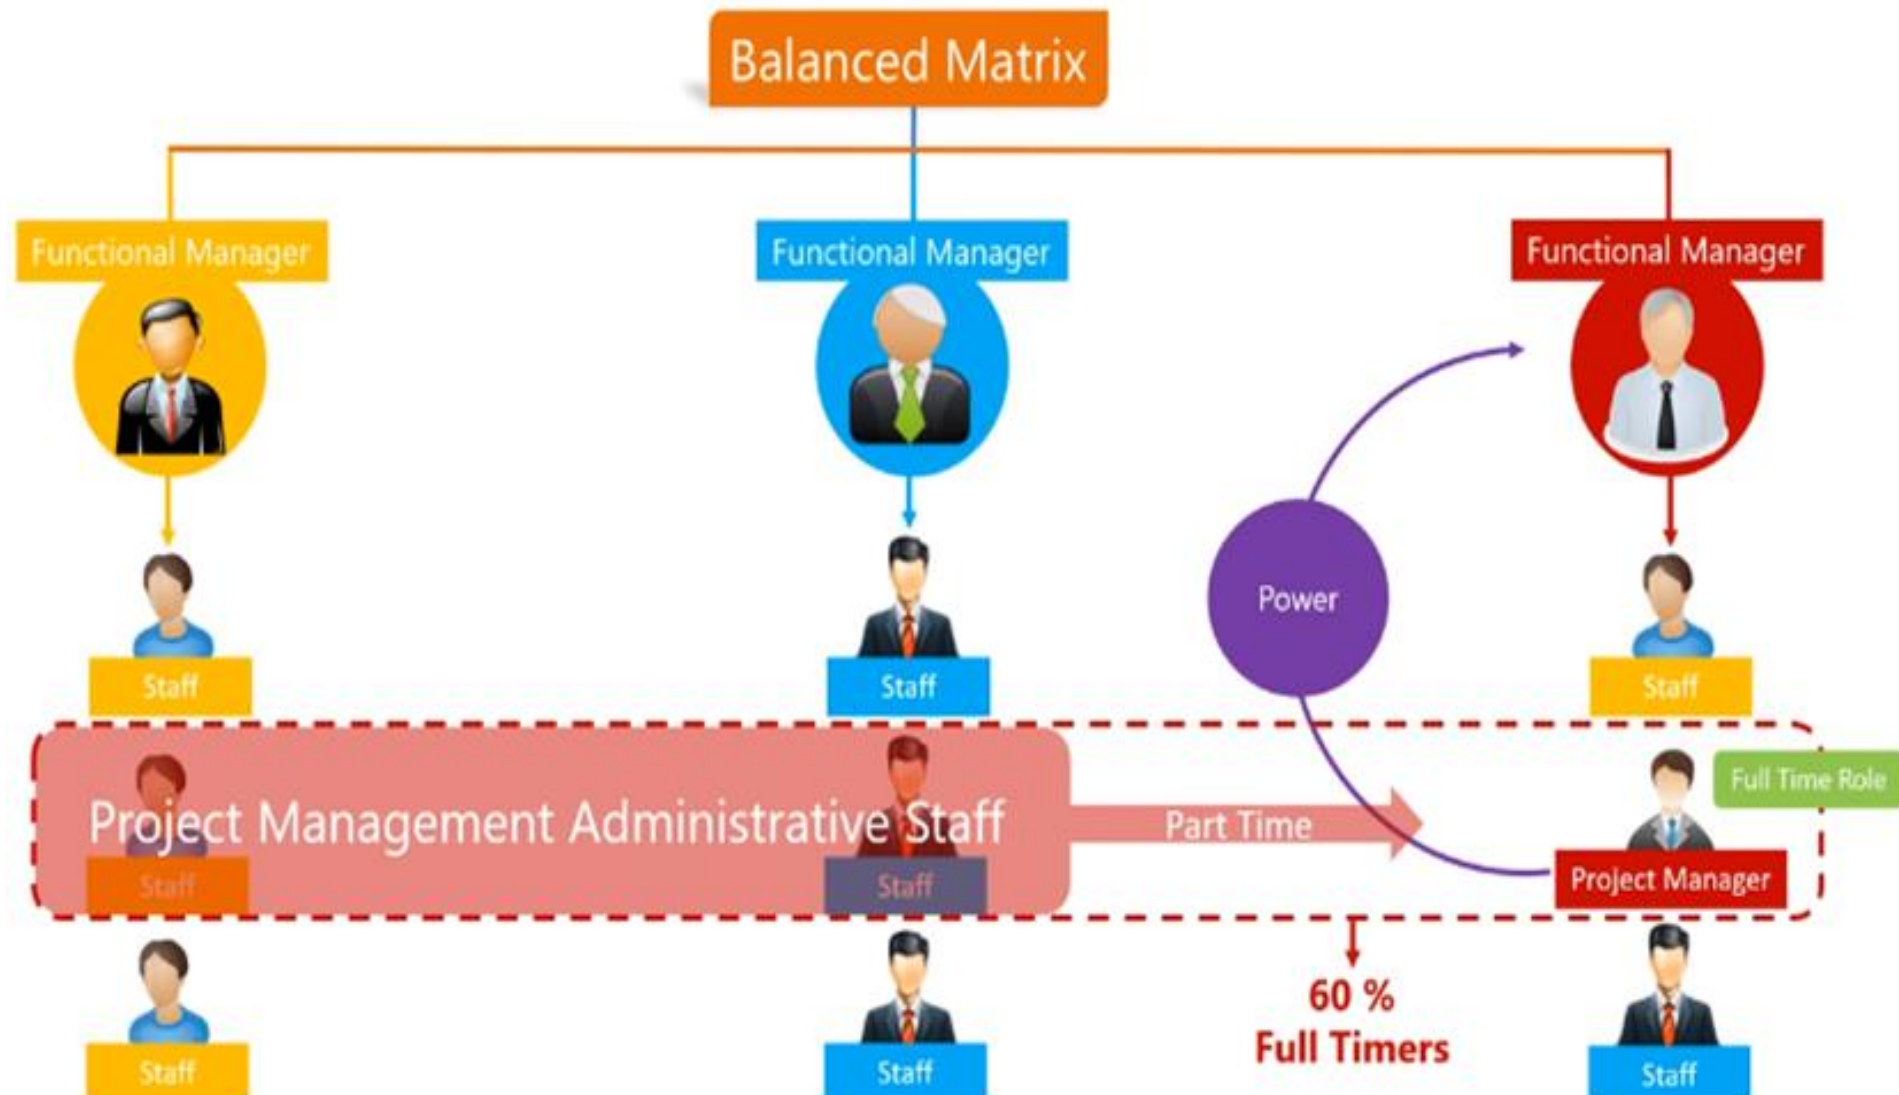

Typical Example of Weak Matrix Organization

Weak Matrix Organization

- PMs have some authority, but they aren't in charge of the resources on a project.
- Major decisions still need to be made with the functional manager's cooperation or approval.
- Project expeditors and project coordinators can work in weak matrix organizations, too. (*Project coordinators are like expeditors, except that coordinators typically report to higher-level managers and have some decision making ability. Expeditors have no authority at all.*)

Typical Example of Balance Matrix Organization

Advantages and Disadvantages of Balance Matrix Organization

- Project managers share authority with the functional managers.
- PMs run their people-management decisions by the functional manager, but the functional manager runs his project decisions by the PM, too. (*Folks who work in a balanced matrix organization report to a project manager AND a functional manager equally.*)

Advantages and Disadvantages of Matrix Organization

Advantages

Highly visible project objectives

Improves Project Management control over resources

More support from functional areas

Requires Extra administration

Requires more than one boss for project teams

More complex to monitor and control

Disadvantages

Advantages and Disadvantages of Matrix Organization

Organization Structure Project Characteristics	Functional	Matrix			Projectized
		Weak Matrix	Balanced Matrix	Strong Matrix	
Project Manager's Authority	Little or None	Limited	Low to Moderate	Moderate to High	High to Almost Total
Resource Availability	Little or None	Limited	Low to Moderate	Moderate to High	High to Almost Total
Who controls the project budget	Functional Manager	Functional Manager	Mixed	Project Manager	Project Manager
Project Manager's Role	Part-time	Part-time	Full-time	Full-time	Full-time
Project Management Administrative Staff	Part-time	Part-time	Part-time	Full-time	Full-time
